

7/17/18

To whom it may concern:

The purpose of this document is to provide additional information to help process the application. This frequency authorization application (STA) is intended to cover the entire state of California in efforts to support San Diego Fire and Rescue. In detail, it is a communications link between air and ground however, the physical location is not known since a wildfire may occur anywhere in the state of California. Therefore the locations stated in this application are approximate and not given with any certainty. The ground antenna is a temporary installation on a rugged tripod and only 1.5 meters off the ground. Please feel free to ask any questions that will help you understand what we plan to do, thank you.

Sincerely

Robert A Guzman  
Staff engineer  
General Atomics – Mission Systems
