

General Communication Corp.
FCC Form 422
Exhibit 1

PURPOSE OF APPLICATION

The purpose of this application is to acquire an experimental license to support testing of a Point-to-Multipoint Wireless DOCSIS (Data-Over-Cable Service Interface Specifications) distribution system. The testing is to determine if a commercial deployment of a network using the type of equipment under test is a viable method of delivering Wireless Broadband Access to Alaska communities.

It is GCI's intent to use the GCI licensed B-band PCS Spectrum of Call Sign KNLF298 for these tests.
