Request for Info - STA File #0592-EX-ST-2006

---

Message:

#### Amendment

This amendment is filed in response to the FCC's request for further information, dated August 21, 2006 with respect to the above referenced request for special temporary authority (File No. 0593-EX-ST-2006). The amendment makes the following changes to the pending request for special temporary authority:

- 1. Modifies the requested frequencies for the STA from 13950 – 14500 MHz to 14000 – 14500 MHz.
- 2. Provides additional information regarding the proposed tower site, along with the required antenna sketch.

Applications File No. 0592-EX-ST-2006 and 0593-EX-ST-2006 are very similar, but not identical. The applications involve separate send/receive antenna that will be conducting separate tests. General Dynamics Advance Information Systems ("GDAIS") respectfully requests processing these two applications separately.

This amendment renews its request for expedited processing of the special temporary request because of the time sensitive nature of this request.

Because this project has been classified "top-secret", the Federal Government prohibits GDAIS from disclosing the name of the federal agency, the contact person at the agency, the project number, or the name of the project. Nor can GDAIS disclose information regarding which satellites are being used as points of communication.

GDAIS has in the past filed Form 442 applications in this manner and received approval from the Federal Communications Commission with providing the confidential information, most recently for an application filed with the FCC in January 2002.

The proposed changes requested in this amendment and the antenna sketch were transmitted to the FCC electronically today.
