Subject: Narrative Statement for STA 0213-EX-ST-2012

Dear Sir/Madam:

A STA is needed for the development of a software defined radio, also known as Manpack Radio, running Wide Networking Waveform (WNW).

General Dynamics C4 Systems (GDC4S) is continuing its development of a software defined radio, also known as a Manpack Radio, running Wide Networking Waveform (WNW) that is targeted for the Department of Defense (DoD) market and potentially for other customers, also. The tests yet to be performed include over-the-air testing outdoors in the vicinity of GDC4S' Scottsdale Facility that will help identify the effects of multi-path and range capability.

Please contact me if you need any additional information or have any questions.

Sincerely,

Gil O. Estrella
