General Dynamics C4 Systems

Special Temporary Authority

Exhibit 2

eNB will be deployed with sectorized panel antennas. The antennas used will have horizontal beamwidths of 65deg and support remote electrical tilt (RET). Due to the transportable nature of the eNB configuration, the horizontal and vertical orientation of the eNB antenna will vary based on the location within the area of operation. However, in all instances, antenna pointing will be selected to maintain coverage within the boundaries of the area of operation.
