Subject: Additional Information Request

---

Message:

This license is requesting use of three bands, C, S, and L for testing and demonstration of two types of radio products: Wi-Fi and LTE based.

Both Wi-Fi and LTE usage are based on industry standards which define parameters such as channel width, modulations, etc.

As with the other two bands, 2200-2300MHz range is used for testing terrestrial products. No satellite use is anticipated.
