Re: General Motors Research Corp
File# 0114-EX-ML-2014
Question 6: Statement of Research Project

This authorization will be used to provide communications essential to a research project into automobile research and development, including many FMVSS (Federal Motor Vehicle Safety Standards).

These communications facilities are necessary for this research project. General Motors Research Corp will use the requested radio communications to broadcast real-time weather information to the drivers on the testing tracks. They require this information to ensure compliance with the testing specifications.

The existing communications facilities are inadequate because General Motors Research Corp currently relies on the drivers to verify weather conditions pre and post testing. This process is time consuming and doesn't ensure that the conditions were not out of tolerance during the actual testing

Please feel free to call me if you have any questions. My number is 503-794-3767.
