Subject: Request for Info - File #0212-EX-CN-2017

Message:

1.) How an individual unit or multiple units can be shut off if there is a complaint of interference.

RESPONSE: In the event that an interference complaint is received, GM will take immediate steps to resolve the interference. GM will have control of the units and of personnel who will have access to the units and be able to disable them. Specifically, GM can disable the units by either disconnecting the units from any source of power so they do not have the ability to radiate or through software deployed in all the relevant vehicles that would turn off any ability of the units to radiate.

2.) How will GM maintain control of devices over the length of the experiment and retrieve devices upon completion of the experiment or otherwise render them inoperative?

RESPONSE: GM will maintain control of the SRR units over the length of the experiment by tracking, monitoring, and otherwise being responsible for each unit. Upon completion of the experiment, and assuming continued SRR operations is not thereafter authorized, GM will render the SRR units inoperative under one of the methods described in question (1), thereby preventing the units from radiating.
