## Prox- 1

David Spencer

Dear David

Thanks you for the frequency coordination request. We have now finalised the frequency coordination as follows:

Uplink: 437,345 MHz

Emission Designator: 11K4F2D

We cannot coordinate the downlink as the frequency range requested is not in an amateur radio band.

IARU has coordinated a frequency in a band allocated to the amateur satellite service, based on the information that has been provided to it. Your licensing administration is the only party who can properly authorize your project to use a band allocated to the amateur satellite service. The IARU frequency coordination set out above is intended to maintain minimum interference in the bands allocated to the amateur satellite service. It should not be taken as any agreement or consent by IARU to allow services other than the amateur satellite services to use this band, nor as any warranty that the frequencies will be free from interference.

Please let us know what the final launch date is.

Please note that all frequencies in the amateur satellite service are shared frequencies. We have attempted to make the best possible selection for your project.

You are also referred to the ITU requirements for satellites. We have prepared an easy reference document which is available on [www.iaru.org/satellite](http://www.iaru.org/satellite), it will assist you to comply with the ITU requirements for Amateur satellites. Please advise me the API details once you have received the information from your regulator.

Please also read the “controlling satellites” document available on [www.iaru.org/satellite](http://www.iaru.org/satellite)
