

EMC Interference Analysis of Globalstar NGSO MSS network

This request will result in no possibility for increased interference. In this request, Globalstar seeks authority, in connection with the CubeSat mission, to use the FCC licensed and ITU registered Globalstar constellation to receive transmissions from the CubeSat mission, and transmit that information to Globalstar ground stations. The link from the Globalstar constellation to the Globalstar ground stations is indistinguishable in its characteristic from the technical characteristics of Globalstar's already-licensed space station transmissions.
