Subject: Request for Info - File #0140-EX-PL-2014

Message:

Re: Experimental license request - File No. 0140-EX-PL-2014, Harris Corporation ("Harris")

Doug,

Harris had previously provided the requested information to the Federal Aviation Administration (FAA) Eastern Regional Frequency Management Office for coordination in an attempt to ascertain an NGT number.

After an extended delay in hearing back from the FAA coordination team, follow up contact was made. The FAA coordination team then responded, stating that there was a backlog of coordination requests.

Upon further follow up, last week the FAA coordination team forwarded and requested that Harris complete an FAA Form 6050 - Frequency Engineering Request Form. Harris is in the process of completing this form and anticipates submitting it back to the FAA coordination team shortly.

Harris is still actively attempting to successfully coordinate with the FAA Eastern Regional Frequency Management Office to obtain an NGT number. Upon successful coordination, Harris will provide the FCC with the issued NGT number as soon as it is issued.

Thank you for your patience.
