Re: Experimental license request - File No. 0140-EX-PL-2014, Harris Corporation

Doug,

Pursuant to the last Request For Information issued on September 29, 2014, below you will find an update on FAA regional coordination.

As indicated in the response to RFI Ref. Number 24683, Harris had previously provided the requested information to the Federal Aviation Administration (FAA) Eastern Regional Frequency Management Office for coordination in an attempt to ascertain an NGT number.

After an extended delay in hearing back from the FAA coordination team, follow up contact was made. The FAA coordination team then responded, stating that there was a backlog of coordination requests. Upon further follow up, the FAA coordination team forwarded and requested that Harris complete an FAA Form 6050 - Frequency Engineering Request Form.

Harris completed the requested FAA Form 6050 - Frequency Engineering Request Form and it was submitted back to the FAA coordination team. As of today, Harris is still awaiting a response from the FAA on the coordination.

Harris remains actively committed to successfully coordinating this with the FAA Eastern Regional Frequency Management Office to obtain an NGT number and appreciates the Commission's patience in the coordination delays.
