Message:

Mr. Ghaffari,

I have updated the filing per your request. An updated start date has been added and the latitude and longitude values have been inserted. Please note that this is a mobile application and the instructions state that if mobile is selected we are not required to insert these values. Concerning the emission designator the second symbol X value I believe is valid as the device operates on a single channel with digital modulation and is TDD which excludes it from being symbol 0, 1, 2, 3, 7, 8 and 9. I also corrected an error concerning the amount of product from 50 to 150.

Best Regards,

Robert Paxman
