

Itron, Inc.
Liberty Lake, WA

EXHIBIT A
Amended Experimental License
File: 0584-EX-CM-2019

We are requesting the amended experimental license add a location of a newly acquired by Itron facility. This will allow them to develop and test equipment that is used internationally. In addition, one Itron facility we are adding a range immediately around the facility for testing like with our other facilities.

With this experimental license it allows for development of product in our facilities, for markets outside the USA. Since the license was originally applied for, the ranges in Europe and elsewhere has expanded to wider ranges, and therefore we are requesting to expand the 870MHz experimental frequency range to line up the latest expansions.
