Message:

Hi,

The "Ant Cable Insertion Loss" cell on the Link Budget has been customized to reflect our system's signal loss: cable run from external antenna to amp (10 dB) and antenna insertion loss (about 1 dB) for a total of 11 dB of loss.

The closest wall being hit by the signal is approximately 60 ft. from the repeater. We have uploaded a revised ERP spreadsheet as an exhibit to show the calculation of the signal strength at 60 ft.

Please let us know if you need anything else. Thanks!
