

## SahaRa 01 Radar Test Plan v1

8/2/2012

SahaRa is an experimental X-band Mobile Radar System currently under development at KEYW Corporation. During the test period from September 1<sup>st</sup> 2012 to February 28<sup>th</sup> 2013, the system will be operated infrequently for collections, radiating approximately 2 hours per week. Each collection will only last a few seconds. The SahaRa system is mobile but we can restrict our areas of operation within Anne Arundel county Maryland if necessary.
