

February 11, 2014

Federal Communications Commission
Experimental Radio Service
Office of Engineering and Technology

Gentlemen:

In addition to the information in the application for a new license, the following information is provided:

We desire an Experimental License to broadcast through calendar year 2016, so a three year temporary license would be preferred to a two year license.

The intended purpose of this license is to support development testing of a broadband sensor. The intended user of this sensor is the US Navy. Development testing would include both pattern and high power breakdown testing at discrete frequencies across the requested band of operation.

Let me know if you need any further input.

Regards,

Gary Amaral
Test Range Manager

GA/ga
