Message:

My apologies, I don't think I understand the question fully.

There are two fixed sites, whose locations were specifically detailed in the application and whose antenna configurations are shown in Attachment 1 & 2 figures.

Additionally there were two mobile types that were defined in the application, who will operate in a rectangular area that was defined in Attachment 3.

You have questioned the two Mobile's location and its operating radius. My response is that the a mobile vehicle installation will have both Mobile types. The vehicle will operate anywhere inside the bounded rectangular area defined in Attachment 3. The mobile types communicate with one or both of the fixed site antennas.

Let me know if further clarification is required  
thanks  
Jeff Hinke
