

## **Exhibit 1**

This application seeks to modify the Station WI2XYO license to:

- Reduce the power level for the ground-based transmissions from 50W to 5W (Output Power/ERP)
- Delete the airborne transmissions

Regarding Special Condition 5 (“(5) *Operation is subject to notification of the following within 200 miles of the test area: • Paging Service licensees in 454 MHz/459 MHz • General Aviation Air-Ground Service in 454 MHz/459 MHz*”):

In light of the fact that the only remaining operations will be ground-based transmissions with only a 1 km radius – it is respectfully requested that the Commission modify the 200 mile notification range in Special Condition 5 to a much smaller range.
