Message:

Mr. Ghaffari:

On behalf of Leidos, Inc., and in reply to your inquiry (Ref. 38442), this is to report that 2 way communications to satellites in space are planned under the experimental license.

Leidos is required to pull from an "occasional use" pool of bandwidth from different providers. Below are the possible satellites this system may communicate with CONUS as of now.

SES-1 @ 101W  
AMC-21 @ 125W  
IS-29E @ 60W  
IS-37E @ 18W

Please let me know if you have any further questions on this issue or otherwise with respect to the pending application.

Best regards,

Jeff Rummel  
Attorney for Leidos, Inc.
