Subject: FCC File No. 0110-EX-ST-2021

---

Message:

The proposed operations will not exceed 0.05 W of effective radiated power and will be conducted exclusively at the applicant's large area testing facility, at a significant distance from any adjacent operators. Initial analysis suggests that such extremely low power emissions are certain not to exceed the boundaries of the applicant's property. Furthermore, the test configuration has the antenna oriented on a down-tilt and pointed directly at the intended receiver; accordingly, no energy will be emitted into the atmosphere above the antenna. Applicant is of course willing to coordinate with any identified FSS incumbent operators in advance of initiating operations, should that be necessary.
