Message:

In response to the request for more information sent to us on June 23, we provide the following responses:

1. In reviewing the list provided, only 1 site is remotely near our area of operation. It is 6.7 km away and not in line of sight, given the mountainous terrain in the area.
2. Of the radios we plan to use, the vast majority are indoor radios at 250mW or less and pose no area of concern with regards to interference to other incumbents.
3. The two outdoor radios we have will be in one area providing coverage over an old baseball field on the Lockheed property. These radios are intended to be used with down tilt and are pointing into a valley. No RF propagation is expected outside this valley.
4. The Azimuth of the two outdoor antennas are 223 degrees and 298 degrees True North pointing away from the aforementioned site.
