Message:

FAA assigned the NGT numbers to both locations following discussion with Spectrum Engineering Office.

Specifically, the series numbers account for the following frequencies:

NG T180256 = 2700 MHz +/- 200 MHz

NG T180255 = 2750 MHz +/- 100 MHz

NG T180254 = 2702.5 MHz +/- 5 MHz

Ranges of bandwidths were selected to account for limitations to the FAA's WebFCR system as well as to cover and signal presence across the full 2700-2900 MHz band for which FAA coordination is required, from even the 3100 MHz and 3200 MHz channels at 600 MHz bandwidth.
