

**OPERATIONS IN SUPPORT OF U.S. GOVERNMENT CONTRACT**

Lockheed Martin Corporation ("Lockheed Martin") hereby seeks experimental authority in support of a contract with the United States Defense Advanced Research Agency (DARPA) (Contract No. HR0011-11-C-0033). DARPA has stated that a successful demonstration of an advanced RF system needs to include the ability to sense and interact with HAVEQUICK II - a narrow band frequency hopping waveform. The requested license will be used to establish a HAVEQUICK II communication link between two Harris PRC-152a tactical radios in Moorestown, NJ. The goal of this experiment is to determine the maximum reasonable distance that a link can be maintained between the radios using HAVEQUICK II.
