Subject: Re: Spectrum Coordination Between Loon and AT&T

Hi Brian,

Thanks for the update. This is great news! Julie is out of the office at the moment and is probably best to talk next steps. I believe she is back in the office on July 22nd and I'll get a meeting setup for that Monday between the three of us for that date.

Regarding coordination and the "stop button", we will definitely coordinate with your team ahead of any testing, will have operations folks (and likely engineers) monitoring the system at all times while it is in use, and have the ability to immediately shut off in the case of interference reported by your team. When we meet with Julie, we can discuss the preferred logistics arrangement for this.

Thanks,

Ben

Ben,

We are ok with this test now, provided there is a stop button in case of interference or if we need to make a new deployment. Additionally, we will need to be kept updated on the schedule as the testing draws near. If you or Julie would give me a call, we can get synched on next steps.
