

Antenna Registration Question 5: FAA Antenna Sketch

The ground node antennas will be mounted on tripods less than six meters above ground level. The ground nodes will not be mobile during testing. The airborne node antenna will be located on an aircraft and mounted on the underside of the fuselage. The airborne node will be operated at altitudes between 5,000 ft and 10,000 ft in the specified mobile area of operations. The ground and airborne node antennas will be mounted in a fixed position and the beams will be electronically scanned.
