

Notes:

- Antenna is only erected for 1-2 hr duration of test event, and stowed at ground level otherwise
- Test site is located within restricted airspace (R-4102A/B), which will be activated during test events
- Ground and airborne spotters will be used to monitor for air traffic which may enter the restricted airspace during testing
- Helicopter pilot can activate a quick-release at the upper attach point and release the antenna in the event of traffic entering the restricted airspace or any other in-flight emergency
