

NOTE REGARDING ANTENNA REGISTRATION FOR FILE NUMBER 0892-EX-CN-2017

Lightweight, On-Body, Wireless System for Ambulatory Voice and Ambient Noise Monitoring

The system is an on-body, wearable device that is not limited to any location in the United States. Human subjects enrolled in the research project are not limited to a particular location in the United States. Since the online FCC application form entries for antenna locations request center coordinates and radii, we have filled in a location around Lexington, Massachusetts, but request that the mobile device be approved for use anywhere in the United States.
