

MODULATING SIGNAL DESCRIPTION

Emission 100KN0N

This emission is a CW Tone and will not be modulated.

Emission 100MW7C

This emission is a playback of a 5G recorded signal. This signal will utilize Orthogonal Frequency Division Multiplexing (OFDM). OFDM is a composite of multiple modulated signals together. In the case of 5G the individual signals that make up the OFDM signal can be modulated in amplitude and phase.
