---

Message:

Behnam,

In my view of the filing, I see that I have the ERP provided in watts and there is an indication that the system is NOT mobile. I.e., the value under Mobiles empty in the station location section. In the view of the antenna registration page, it is already indicated/selected as "Fixed/Base".

I'm not sure where or what to change on the forms other than what I provided already. Please advise how and where to change those values if you are not seeing what I am seeing.

For reference, the system is fixed. The radio has a peak output of 550 watts (which we limit dynamically below that value). Its peak output is 55 dBm and the peak antenna gain is 8 dBm thus the total is 63 dBm.

Please let me know what next steps I should take if any.

Best regards,

Michael
