

The MITRE Corporation is a not-for-profit Federally Funded Research & Development Center (FFRDC) that assists the US Government with scientific research and analysis, development and acquisition, and/or system engineering and integration. The Cyber Effects and Information Warfare laboratory, located in San Antonio, TX is responsible for evaluation of commercial communications technologies in support of Department of Defense applications. This work will be performed in support of Air Force contract FA8702-21-C-001.

The MITRE Corporation acquires, researches, and evaluates commercial equipment to include modems, amplifiers, multiplexers, and VSAT terminals to assess on behalf of the U.S Government. As part of ongoing evaluations MITRE leases satellite bandwidth to perform over-the-air assessments of commercial equipment that requires FCC licensing.
