

1 Introduction

The MITRE Corporation is a not-for-profit corporation that manages several federally funded research and development centers (FFRDCs) which support multiple US government agencies. In either direct or indirect support of its tasking by government sponsors, MITRE has often conducted research in experimental technologies.

We intend to conduct testing of experimental communications technology supported by novel detection, direction finding, and geolocation technologies in Bedford, MA. Testing is planned for the next two years with intended use within a 0.5 km radius of the MITRE Bedford Campus located at 202 Burlington Road, Bedford MA 01730.

2 Transmitter Information

Type	Freq (MHz)	Power (dBm EIRP)	Bandwidth (MHz)	Emissions Designator
Mobile	1915-1920	20	1	1M00W7W
