Message:

I have not yet received a response to my coordination request to Ligado Networks Subsidiary, LLC with respect to the specification of 1540 and 1548 MHz channels but I did hear from INMARSAT that Giselle Creeser is no longer with INMARSAT. These two channels are requested for two telemetry transmitters from two separate race vehicles at one watt ERP over an 8 MHz bandwidth for one race day. We would ask that the channels be granted. There is no interference potential to satellite Earth stations.

We do not understand the coordination request for the 6875-7055 MHz segment from Globalstar. This band is heavily used daily for electronic news gathering for video production in every market in the United States. It is not allocated to Globalstar.

This race is to commence March 9. We respectfully request grant of these channels and the application as submitted, but if there is no chance of that, please grant the remainder of the application and omit these bands.
