---

Message:

Given the alternatives with respect to the band 156.0125 to 163 MHz, we would ask that this segment be removed from the pending application so that what remains in the application at VHF is 150.0-156.0 MHz and 163-174.00 MHz.

However, it is noted that, with the exclusion of spot channels as noted in the Narrative exhibit to this application, the same band was specified a year ago and granted, without incident, per 0214-EX-ST-2019. If exclusion of those spot channels as specified would be sufficient to address the AIS allocation, we would prefer the excusion of spot channels rather than exclusion of the entire segment 156.0125 to 163 MHz.
