Application Narrative for Proposed Special Equipment Program

Proposed Program

Martin Brothers Distributing Company Inc. requires a GPS signal inside its facility to obtain a GPS lock for the GPS receivers that are being used on their fleet of vehicles. The GPS lock is required so that they can more effectively and efficiently track their vehicles at all times throughout the day.

It is also a requirement to maintain a GPS signals indoors so that service technicians are able to test, operate and perform maintenance on these systems while indoors. Our proposed set up is already in use and specified in the approved application to re-radiate GPS for RTD Transit in Denver CO.

Objectives

We seek to accomplish the following objectives:

1. Illumination of our maintenance and service bays with re-radiated GPS Signal
2. Further design, development and enhancement of existing GPS products and the possibility of new product testing
3. Ability to troubleshoot and repair all equipment and systems utilizing GPS signaling without having to relocate the equipment outdoors in view of the satellites
