Message:

The lab in Bentonville is involved in the long term development of products. While the current effort to develop an antenna for a specific product is expected to be completed within a year, subsequent products will also require device specific antennas to be developed. The efforts are expected to be ongoing. The lab in Bentonville is unique as they have recreated real life recreations to test products in operational specific environments. They have literally recreated sections of Home Depot and Wal-Mart complete with merchandise stocked shelves of stores to assess the performance of our devices in a lab controlled environment. Utilizing the facility for development for multiple spectrums is seen as a long term effort, hence the request for a 60 month license.
