---

Message:

This is not an electronic attack or jamming system.

It is a tactical radio system produced by L3 Harris (RF-7850S). It will be used to create a wireless connection between a fixed control center and three fixed RF sensor sites all within a 1 Km radius of the control center location. The location is at Eglin Airforce Base, Florida and the event name is Apollyon 2020.

Datasheet of radio is a should be attached to the application.

The radios are strictly for communication purposes. We have previously applied for a jamming system for the same event which has been denied. This is a separate application to that.
