Subject: Request for Info - File # 0108-EX-ST-2018

Message:

NCN intends on installing multiple 3.5 GHz radios in the 'Bowtie' area of Time Square attached to billboards, facades and on top of kiosks. The area addressed and where testing will occur is entirely outside; the Bowtie is a pedestrian plaza. The user devices will consist of CBRS dongles plugged into laptops or tablets having USB ports. The main purpose of the test is to determine propagation behavior and capacity metrics in an ultra-high density environment.
