External Email:

Hello Robert,

Thanks for the heads up and sorry for the late response. I appreciate the involvement of the SBE with this. Good luck with the ATSC3.0 demo. I used to work at KLAS right down the street from LVCC, and could easily walk over to the show!

I described the capabilities of 3.0 to the board a translator group in Colorado whom I was doing maintenance for. They are excited for the day when they can deploy it in the rural areas they serve.

I can confirm that 596-602 Mhz is silent. Channels 33 and 34 are also quiet in town, and you can keep those as options too.

I usually get about half a dozen frequency coordination requests for the NAB show on a regular year, mostly for microwave ENG operations. Times have changed, and I don't expect any this year unfortunately.

Thanks again, and let me know if I can assist in any way.

Hi Dan

I need an STA for a UHF-TV channel during the NAB Show. According to LMS KVTE-LD, Channel 35 is silent until October 2022, making Channel 35 available. I wanted to confirm with you that channel should work before I file with the FCC.

Operating parameters:  
Transmitter Power: 5 watts (max)  
Antenna gain: 8 dBd  
ERP: 31 watts (max)  
Antenna height: 10 feet AGL  
Location: Indoors, within LVCC, North Hall

Emission: ATSC 3.0  
Dates: October 8-13, 2021.

Thanks,

Bob W.
