Subject: Additional Information Request

Message:

Request: The technical description document states: "Each spacecraft will contain an S band receiver to support command and control, including command termination of transmission if necessary" Please identify the S-Band receiver component for the 1T Thinsats in the ODAR DAS logs.

Answer: The S band receiver in the 1T Thinsat, is part of the "Main PCB" component in the 1T DAS input data. The receiver module is located on the Main PCB board, and operated by the processor on that board.
