

Explanation of Need for Replacement STA for THINSAT-1

Attachment to STA 1850-EX-ST-2018

This STA replaces STA 1063-EX-ST-2018, which was granted October 5, 2018.

ThinSat-1 has been remanifested to launch on NG-11 instead of NG-10. The only change is that the launch will occur later; all of the orbit parameters, lifetime and technical parameters of the spacecraft and mission remain unchanged from those granted in the original STA.

The decision to move to NG-11 was part of the change of launch schedules to respond to the recent Soyuz failure.
