Subject: Additional Information Request

Message:

Here is our response to the request - "Please provide the level of shielding attenuation and the outdoor power."

Horizontal shielding is through -50dB absorbers and a cinderblock wall estimated at -25dB for 20GHz power. PFD just outside the building on horizontal is -90 dBW/m².

Vertical shielding is through a -18dB wire mesh reflector, -40dB reflective ceiling paint and a wood ceiling -3dB. PFD just outside the building on vertical is -80 dBW/m².

Feel free to contact me with any further questions.

Thank you,

Andrey
