Subject: Additional Information Request

Message:

1) Please ask the applicant to show the uplink frequency in the Spacecap.

Answer: The uplink frequency is already shown in the Spacecap, and the issue may be that the uplink frequency is not shown in this space station application. It is not shown in the application because the ground station is being licensed separately, under application 0121-EX-CM-2020, by University of Illinois, and we did not want to give the impression that we are applying to license the ground station in this space station application. But if FCC prefers, we can add the uplink frequency from the ground station, to this space station application. Please let me know if that is desired, or something else.

2) The applicant did not provide the frequency bands to be used in the technical description, please show the frequencies.

Answer: the Technical Description has been modified to show the frequency values. This version has been uploaded as an exhibit to the application.
