

Numerica Corporation

Exhibit B – NTIA Site

The third site, located at Table Mountain National Radio Quiet Zone, is being added to allow cooperation with the NTIA for measurements of the Spyglass transmitter.

Numerica and NTIA are undergoing Cooperative Research and Development Agreement (CRADA), in which NTIA will measure the radar's emissions for the RSEC criteria and provide that data set of information to Numerica, while NTIA in turn uses the data for mutually beneficial purposes.

This agreement requires the radar to be tested at the NTIA Table Mountain facility and operated by Numerica for radiated RSEC measurements.
