Message:

Anthony, or other interested party within the FCC,

I have just uploaded EIRP calculation spreadsheet exhibits for all three of my intended GPS re-radiator installations that show compliance with the -140dB requirements.

I originally added spreadsheets showing -130dB compliance, as I thought that was the correct limit.

The second set of EIRP calculation spreadsheets have had the repeater/RF amplifier power numbers adjusted to meet the -1490dB requirement, and I will specify the hardware be provided as such.

Regards,

paul J. DeYeso
