Subject: Additional Information Request

---

Message:

The following responds to the questions from Nimesh Sangani issued on July 16, 2021. The original questions are cut and pasted in bold with Ocean Infinity's responses following.

1) Are all the surface vessels used in this experimental request U.S.-registered vessel(s)? (Yes/No)

U.S. registration of the vessels is in process. It is expected to be complete by the end of July.

2) Please explain the communication path for the 1390-1400 MHz band request.

The 1390-1400 MHz band path will consist of an IP mesh network between vessels and offshore and/or shoreside control points.

3) Your exhibit states that "Control of the Armada fleet vessels will be maintained at all times using satellite and WiFi links for redundancy purposes." Do you have a license for the satellite portion? Please provide more detail on this topic.

The satellite link is provided by service obtained commercially from Iridium. The satellite link provides basic command/control if the IP mesh link drops out. Ocean Infinity does not hold a license for this portion of the proposed operation and is not requesting a license because it believes no license is required.
