To whom it may concern,

Usage Information:

Since the mid-1970's, Ohio University has performed ILS equipment testing at our ILS test facility in Miami FL (Kendall-Tamiami Airport). We have not been doing that type of work there for the last 10 years or so and we inadvertently let our ILS frequency licenses expire. Looking to resume some ILS testing work, we would like to get re-licensed. While most of our ILS work is performed under government contract, some work is performed under a direct contract with the equipment manufacturers (Thales/Selex). We are currently under FAA contract (DTFAWA-10-D-00020) to perform an ILS equipment demonstration in 6-8 weeks. The duration of this work will be through the duration of our contract which is May 2015.

Respectfully,

Jamie Edwards
Research Engineer
