

**Panasonic Avionics Corporation  
Modification of Call Sign WG2XZX  
T-PED Interference Ground Testing at  
Guam International Airport, Tamuning, Guam and  
Honolulu International Airport, Honolulu, Hawaii  
May 12, 2015**

**MODIFICATION NARRATIVE**

Panasonic Avionics Corporation (“Panasonic”) respectfully requests a modification of its existing two-year experimental license (Call Sign WG2XZX) to add six frequency bands at each of the two (2) authorized test site where Panasonic will conduct ground testing in support of Panasonic’s Global Communications Suite (“GCS”) featuring the “eXconnect” Ku-band aeronautical mobile-satellite service (“AMSS”) off-board link and onboard connectivity for transmit portable devices (“T-PEDs”).

Panasonic has sought and received FCC authorization for other STAs to conduct T-PED interference testing at airfields using the same test frequency bands that are proposed in the amendment. Most recently, the FCC authorized Panasonic to conduct testing under Call Sign WI9XHC (File No. 0079-EX-ST-2015), an experimental STA at the Sussex County Airport in Georgetown, Delaware.

Attached is Table 1, which lists the amended test frequency bands. Also listed are the proposed wireless standards and associated technical information for each test band: modulation (pulse or continuous wave), maximum EIRP, maximum ERP, emission designator, among others. A single 1 MHz test frequency in each uplink band, also identified, will be used for testing. Specifically, Panasonic seeks to add the following frequency bands:

- 410-420 MHz: 415 MHz
- 614-698 MHz: 656 MHz
- 1427.9-1447.9 MHz: 1438 MHz
- 1447.9-1462.9 MHz: 1455 MHz
- 1626.5-1660.5 MHz: 1644 MHz
- 2300-2400 MHz: 2350 MHz

The modification to the two-year experimental license does not make any changes to the test site or other information included in the application.
