Washington, DC 20554

Form 422 Conf. No.: EL777429
Form 442 File No: 0801-EX-CN-2021

Submitted Electronically via ELS

To Whom It May Concern:

Parallel Wireless, Inc., an innovative company developing next-generation 2G, 3G, 4G, and 5G radio access networks, respectfully submits a request for an experimental license under 47 C.F.R. Part 5 (Experimental Radio Service). This letter is attached to the above-identified application according to FCC Form 422.

Parallel Wireless seeks an experimental license grant for the frequencies 3400–3500 MHz and 3700–3800 MHz. Parallel Wireless intends to operate in and around its laboratories in Nashua, New Hampshire and in two specified locations in Tyngsborough, Massachusetts. The proposed term is October 1, 2021 to October 1, 2023.

Grant of this experimental license application will enable Parallel Wireless to undertake additional product development, research, and testing that supports its goal to facilitate deployment of mobile broadband networks. The product, and the attendant experimental testing, is relevant to the continued expansion of mobile broadband networks, including methods for increasing capacity, network speed, equipment density, and ease of operation. A full listing of Parallel Wireless certified hardware may be found under FCC Grantee Code 2AI7F.

The following information is provided to satisfy FCC Form 422, Question 7, a–c.

a. The complete program of research and experimentation proposed including description of equipment and theory of operation

The equipment to be experimentally tested consists of Parallel Wireless 5G experimental base stations, which connect to the operator network and provide cellular service. Testing of the experimental base stations will entail conventional handsets connecting to the base stations in their typical operating environment.

b. The specific objectives sought to be accomplished

The objectives to be accomplished is continued testing of both Parallel Wireless software and hardware. This includes testing of hardware revisions and new software releases required to meet the requirements of, and fix bugs for, Parallel Wireless's customers, various network operators. Furthermore, Parallel Wireless hopes to assess performance in real-world RF environments, and performance of various UEs (user equipments) with the experimental equipment.

c. *How the program of experimentation has a reasonable promise of contribution to the development, extension, expansion, or utilization of radio art, or is along lines not already investigated.*

In testing the Parallel Wireless hardware and software, Parallel Wireless hopes to additionally further the understanding of 5G radios and algorithms, research meshing capabilities relevant to 5G radios, and study integration of multiple radio access technologies with antennas in over-the-air testing, including 5G.

Parallel Wireless includes this letter as part of the above-referenced application to affirm its understanding of its obligation to conduct operations under this license. Parallel Wireless accordingly agrees that it:

- Will not utilize the license in conjunction with the provision of mission-critical communications.
- Has designated an overall project manager and a “stop buzzer” contact for these experiments, identified in an attachment to this letter. Parallel Wireless has successfully coordinated such testing for all of its licenses to date.
- Understands that the experimental license will only permit shared use of the subject radio frequencies and that Parallel Wireless may have to coordinate with other licensed entities.
- Affirms that all of its experimental operations will be secondary, such that they must not cause interference to narrowband or broadband operations authorized on a primary basis; and that narrowband and broadband operators authorized on a primary basis have no obligation to mitigate any interference that such primary operation may present to the Parallel Wireless experimental operations.

We welcome any comments or questions from the Commission, either to myself, Senior Corporate Counsel at the contact information below, or to William McDonnell, RF Architect and Manager, at wmcdonnell@parallelwireless.com.

Best Regards,

/s/ Michael Saji
