Subject: Additional Information Request

Message:

Dear Nimesh,

Thank you for your prompt response.

We would ideally like to conduct experiments anywhere in the 27.5 - 28.35 GHz frequency band. Further, in the future we may want to amend our license to conduct experiments in the 24 GHz band or even outdoors within our university campus. Could you please tell us what is the reporting requirement we would have to follow if we get a program license? In case that would be too much of a burden we may instead limit our experiments to only 27.5-27.6 GHz band and only within our laboratory (which has the highest priority for us right now) and apply for a conventional license.

Thanks,
Ehsan
